NordicTrack PRO – Professional Cross-Country Trail Grooming

Perfect cross-country tracks don't happen by chance.
They are the result of knowledge, experience and the right technique.

Whether it's a classic-style trail or a skating trail:

The quality of a cross-country ski trail largely depends on the operator's skills.

Snow conditions, weather, terrain, machine setup and timing all need to work together. Understanding these factors and knowing how to adapt to changing conditions is the key to creating **consistent, safe and high-quality trails** — while ensuring that the grooming machine is used efficiently and in a way that minimizes wear and tear on the equipment.

Nordic Track PRO is S&E – SlopeExperts' manufacturer-independent, hands-on training program for professional cross-country trail grooming.

How deep should you till?

When is the best time to groom the trail?

How should your approach change with different snow and weather conditions?

These are exactly the questions addressed during the training. Participants learn not only **how** to prepare a high-quality cross-country ski trail, but more importantly **why** specific machine settings and grooming techniques deliver better results.

Training Content

- **Snow properties and their impact on cross-country trail grooming**
- **Safe operation of cross-country grooming machines**
- **Preparing the grooming machine and trail route**
- **Base preparation and construction of the cross-country ski trail**
- **Professional preparation of classic-style tracks and skating lanes**
- **Tilling depth and optimal grooming timing**

Your Benefits

- **Consistently high-quality cross-country trails under varying conditions**
- **Safe and efficient machine operation**
- **Better handling of different snow types and conditions**
- **Greater understanding of the interaction between snow, machine setup and grooming timing**

Who Is It For?

For cross-country grooming machine operators and newcomers who want to prepare trails safely, efficiently and to a consistently high standard.

Nordic Track PRO – understand what happens beneath the machine. And put quality into every track.
